Problem1:
I have printed out end work time, service time, service beginning
time, and service ending time which is also the time that machines are back
to work of these running machines to check if them work successfully and
follow the time order.
My server utilization of 2 servers and 10 machines is 0.854 that is
different from the number on homework description, but same as the
textbook description.

Problem2:
Server utilization of 1 server with 10 machines is 0.994.
Server utilization of 2 server with 10 machines is 0.854.
Server utilization of 3 server with 10 machines is 0.645.

Problem3:
Server utilization of 1 server with 12 machines is 0.999.
Server utilization of 2 server with 12 machines is 0.934
Server utilization of 3 server with 12 machines is 0.752.
